Dear Ms. Lauzon,

I will review your questions tomorrow and get answers.  
We should be able to give you a fairly comprehensive list of bait stations.

Thank You,

Subject: PMRA Inquiry - Rodenticides Bait Stations

---

Hello Dan,

The PMRA is currently working on requiring additional risk mitigation measures for rodenticides, similar to those required by the EPA in their 2008 Risk Mitigation Measures for Ten Rodenticides.

I had sent you an email a while back with regards to these questions, but don't believe I heard back from you. In case my previous email got buried in you inbox, I have summarizes my questions below:

- 1- Bo Davis had mentioned that the EPA has received at least one submission for products packaged with Tier 1, 2 or 3 bait stations. I would like to know if the issue of bait stations for rats

vs mice has come up. Considering that bait stations used for rats and mice are of different sizes, have registrants come in with two submissions (one product packaged with mice BS and one with rat BS) for the same product? Or are registrants coming in with bait stations that would be used for both (i.e. only big bait stations)?

2- What is the process (SOP) when evaluating the data sent along with the bait stations (e.g. results of tamper-resistance studies)? The PMRA feels that our process should be in line with the EPA's.

3- Does a list of acceptable bait stations exist, or if one being put together by the EPA?

Any information you can provide on this question would be appreciated.

Thank you for your assistance,

*Anie Lauzon*
